I betcha if the Regional EPA folks had read Joy Horowitz's book, that documented Mr.Kaichen's actions and cover-up in the Beverly Vista Elementary School Case etc., they wouldn't be so deferential to him and School Board Chair Lieberman, who hired him to help cover-up the Malibu schools' case also.

HOW can they keep the press and parents away? How are they allowed to keep everything secret? This is public land, a public school, we are the tax payers. They are spending our tax dollars right? And why has Katchen and Lieberman decided to go rogue by testing and cleaning rooms TODAY not on the EPA's list and NOT the way they are required by the EPA? Please please document everything they do. I am shocked. Maez and Weissman dug up the trenches around my son's eighth grade classroom and disturbed the soil they were too toxic to disturb in Aug. 2011 two weeks before he started school and he was so ill that year he was hospitalized and three of his middle school teachers came down with thyroid cancer. They chose not to clean it for all this years, in fact, they chose to disturb the soil again in Aug. 2013 for another set of children, and now that the EPA has stepped in and I will finally find out what was in that dust our children an their teachers were breathing in all these years, Katchen and Liebermann have decided to deep clean them without testing the dust first and four days before the EPA sends their person to oversee this project?

My guess is they know about the PCBs...I took a picture of some type of PCB tester. Also...they are a clean up company...so they must know that there is some type of concern. Security is on campus to keep parents and press away. :) good time to be a teacher!!!

Great job Brigette! Document everything you can with cameras, video. Write it down. Try to talk to the workers about safety too? DO they know about the PCBs? And the other bad things in the dust and soil?

They were wearing white paper-type suits and blue gloves. Nothing on their face that I saw.
